DECLARATION AND CONSENT

For Online Publication and Peer Review of Academic Work

I, the undersigned, hereby acknowledge and give my consent for the academic work described below to be reviewed and, where applicable, shared publicly online by the person responsible for collecting and uploading the work. I understand that the purpose of sharing is to allow others, including classmates, to view the work and review its quality and my performance.

I understand and consent to the following:

1. **Code / Source Files.** The code may be uploaded to GitHub after review. The repository link may be shared with the class or relevant reviewers so that the code can be downloaded, inspected, and reviewed. I confirm that, to the best of my knowledge, the submitted code represents work I have appropriately reviewed and can explain, and has not been submitted as copied work or generated through unexamined "vibe coding." I have no objection to the work being assessed on that basis, including the awarding of full marks where the evaluator considers this justified. I understand that this declaration does not prevent a good-faith review or the raising of legitimate academic-integrity concerns.

2. **Video-PPT / Presentation.** The video presentation (Video-PPT) may be uploaded to YouTube after review, and the link may be shared with the class or relevant reviewers for viewing and feedback.

3. **Article (if applicable).** If an article is provided, it may be uploaded to a suitable preprint server and made publicly accessible for reading, citation, and review, subject to the server's requirements and any applicable institutional rules.

I understand that online publication may make the material accessible to the public and that it may be downloaded, shared, commented on, or reviewed by others. I confirm that I have had the opportunity to read this declaration and that my consent is voluntary. I understand that this consent is subject to applicable academic policies, copyright, privacy requirements, and the terms of the relevant online platforms.
